

✓ **Applications**

Range of Dead weight tester is designed to test, adjust and calibrate measuring instruments, mechanical or electronic pressure by comparison (pressure gauges, pressure transmitters or sensors or switches)

They consist of a pressure generator connected to a compressed air source, a piston / cylinder unit, a set of identified masses. The capstan can adjust the pressure by the gas through the piston. This pressure is balanced by the piston / cylinder which compares the instrument to calibrate the values of pressures generated by the standard. These scales are intended for pressure calibration on.

The Dead weight are robust and easy to use and have a high long-term stability.

✓ **Technical specifications**

- <b>Calibration :</b>	It is necessary to recalculate the pressure generated by the dead weight according to the different variables. Our dead weight are calibrated in the following terms of use : Temperature 20°C - Pressure atmos. 1013.25 hPa - Humidity 50% - acceleration 9.80665 m/s <sup>2</sup>
- <b>Source Pressure :</b>	Dry air - gas connection ¼ cylindrical female - This balance needs to be connected to a pressure source.
- <b>Check/adjust the seat :</b>	leveling bubble and adjustable feet
- <b>Connection for the instrument to be tested :</b>	swivel G1/2 standard
- <b>Rotating weigh :</b>	Training masses : manual rotation
- <b>Carter :</b>	Light alloy aluminium AG3 + high-resistance paint
- <b>Ratchet :</b>	removable for transport
- <b>Piston/cylinder :</b>	Single piston treated steel or stainless steel and hard chrome - <b>Répeatability</b> : 3.10 <sup>-5</sup> - <b>Sensitivity</b> : 1.10 <sup>-5</sup> - <b>Precision dead weight</b> : 10 <sup>-4</sup>
- <b>Weight :</b>	corrosion treated steel - <b>Weight</b> of the set of weights from 4 kg to 48 kg depending on model – Shape masses ergonomic, easy loading of the masses on the bell - <b>Marking</b> corresponding with the measuring unit (bar, mbar, KPa, PSI etc..)
