

✓ **Applications**

Range of Dead weight tester is designed to test, adjust and calibrate measuring instruments, mechanical or electronic pressure by comparison (pressure gauges, pressure transmitters or sensors or switches)

They consist of a pressure generator, a piston/cylinder unit, a set of weigh identified. The capstan is used to generate a pressure pushing the fluid through the piston. This pressure is balanced by the piston/cylinder assembly which allows to compare the instrument to be calibrated to the pressure values generated by the standard. These scales are intended for the calibration gauge.

The Dead weight are robust and easy to use and have a high long-term stability.

✓ **Technical specifications**

- Calibration :	It is necessary to recalculate the pressure generated by the dead weight according to the different variables. Our dead weight are calibrated in the following terms of use : Temperature 20°C - Pressure atmos. 1013.25 hPa - Humidity 50% - acceleration 9.80665 m/s ²
- Fluid :	Mineral or synthetic oil depending on model, colorless, compatible with medical or food uses – tank volume 125 cm ³
- Check/adjust the seat :	leveling bubble and adjustable feet
- Connection for the instrument to be tested :	swivel G1/2 standard
- Rotating weigh :	Training masses : manual rotation
- Carter :	Light alloy aluminium AG3 + high-resistance paint
- Ratchet :	removable for transport
- Piston/cylinder :	Single or twin piston tungsten carbide and/or treated steel - Repeatability : 3.10 ⁻⁵ - Sensitivity : 1.10 ⁻⁵ - Precision dead weight : 10 ⁻⁴
- Weight :	stainless steel - Weight of the set of weights from 25 kg to 100 kg depending on model – Shape masses ergonomic, easy loading of the masses on the bell - Marking corresponding with the measuring unit (bar, mbar, KPa, PSI etc..)
